
Fight Cancer Differently. With Data.

Every cancer patient deserves access to the science that could save their life. We put that science and the vocabulary to demand it in their hands.

OUR MISSION

Power to the Patient

Further the personalized medicine movement Bryce Olson started by providing a hub of curated self-advocacy tools and resources, for patients, by patients.

OUR VISION

Personalized Medicine for All

Bring personalized medicine to every patient, including in community hospitals and rural areas. Make cancer survivable.

Our North Star. Big, hairy, audacious goal.

OUR PROGRAM: THE SEQUENCE CODE

A five-step patient playbook. Demand sequencing. Decode your report. Find your trial. Five steps Bryce Olson walked when standard treatment failed. The path outlasted a 21-month prognosis by nine years. Now available, free, to every patient and caregiver who needs it. Walk in scared. Walk out armed.

OUR VALUES: E.P.I.C.

E | Education

Provide accurate, accessible content that empowers people with the knowledge needed to fight differently. No false comfort. No vague platitudes. The data first.

P | Patient-Centricity

Put patients' needs, values, and voices at the center of every decision. This movement was built by a patient. The patient is the protagonist, not the victim.

I | Innovation

Promote cutting-edge scientific treatments at the forefront of personalized medicine. The tools exist. We help patients use them.

C | Commitment

Dedicate time, energy, and resources for the long haul, year after year, so no patient has to figure it out alone.

"My dad taught me that cancer does not get to write the last chapter. He wrote his, with music, with data, with every last wave. This movement is how he keeps writing."

Devona Olson, Brand Crusader and Bryce's Daughter

We are grateful to every individual donor whose generosity powers this movement. Your support puts life-saving tools directly in the hands of patients who need them most.
